

Design Specifications & Tips for Creating a Custom Seed Packet

For those who prefer to design the entire front cover and text for the back themselves, here are some specifications and information that may help.

- The front cover can be printed to the edge folds with your design. The back will have a white or brown background, depending on your paper choice, and folded flaps. Your Black text will be centered between the flaps and planting instructions. Keep image and text within the measurements shown.

- Submit your image for the front in JPG format only. Higher resolution images produce better results. At least 800 X 1200 DPI is recommended.
